TrokaBone Sternal Puncture Set with ergonomic plastic handle, extremely sharp cannula tip and adjustable depth 19

DeltaCut Biopsy System

The PAJUNK® cannula system DeltaCut is developed especially for the extraction of single or multiple biopsies of soft tissue of the prostate gland, liver, kidney and a multiplicity of soft-tissue tumours. This system can be applied reliably, precisely and fast. This device is equipped with a visual and mechanical safety- system.

DeltaCut Biopsy system

- 2coloured functionstate-display for system guidance
- continuous puncturedepth regulation from15-22mm
- 2 activator for ergonomic handling for left-handed and right-handed operators
- contamination safe introduction of the biopsy sample in the DeltaCut Cannula

Puncture Cannulas

Angiographic puncture cannula

The angiography puncture cannula made of high-grade stainless steel can be used for different techniques. It is particularly suitable for the Seldinger technique. It is available in the design with hollow and full body stylett and with beveled grinded or round-blunt outer cannula. Its funnel-shaped pointed Luer- hub facilitates a problem-free insertion of the guiding-wire. The blunt, thin-walled outer-cannula is electropolished and is equipped with an exact fitting puncture stylett. Because of that, it has an extremely low friction.

Product	Size	Working length	Color	Item no.	PU
Angiography cannula, 2-parts with full stylett and handle plate	18 G	70 mm	pink	217S120070	10
Angiography cannula, 2-parts with hollow stylett and handle plate	18 G	70 mm	pink	216S120070	10
One-piece puncture cannula with facet grading	18 G	80 mm	pink	1107-3L080	10
Introducer	18 G	70 mm	pink	061151-30S	10

Initial puncture cannula with beveled tip

The initial puncture cannula with beveled tip made of high-grade stainless steel and suits especially for the Nephrostomy and all percutan punctures with guide wire. There are 2-parts as well as 3-parts designs, with and without graduation. Its outer cannula is round-blunt and is aligned with the internal stylett cannula.

Size	Working length	Description	Item no.	Item no.	PU
			[without depth stop]	[graduated, with depth stop]	
18 G	200 mm	2-parts	258S130200	227S130200	10
18 G	200 mm	3-parts	225S130200		10

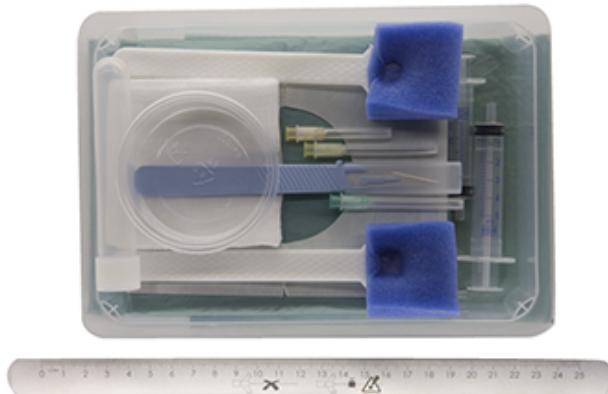

Initial puncture cannula with ultrasonic tip

The initial puncture cannula with ultrasonic tip made of high-grade stainless steel is especially suitable for the nephrostomy and all percutane punctures with guide- wires. There are 2-parts as well as 3-parts designs available, with and without graduation. Its outer cannula is round-blunt and is aligned with the internal stylett cannula.
